Course Overview

Microsoft Copilot for Content Creation and Task Automation is a five-day, 38-hour WSQ programme. Days 1 and 2 build the ability to create verified business content with Microsoft 365 Copilot in Word, PowerPoint, Excel and Outlook. Days 3 to 5 build the ability to automate the process behind that content with Power Automate and Copilot Studio agents, and to integrate, test, secure and govern the result. All twenty-five labs follow one connected scenario — Lumina Living Pte Ltd and its Sustainable Workspace campaign — so each day builds on the last.

Course Code	TGS-2024042588
Training Duration	38 hours across 5 days
Assessment	WA (SAQ) 60 minutes; PP 60 minutes — both open book
Mode of Delivery	Classroom, instructor-led, with individual hands-on labs
Trainer	Dr. Alfred Ang
Class Size	Maximum 20 learners
Attendance	A minimum of 75% attendance is required for assessment and funding

Learning Outcomes

- LO1: Identify opportunities and perform feasibility scans for dataverse and Power App applications.
- LO2: Utilise Business Flow and Power Automate to integrate functions across programs with API-level integration.
- LO3: Execute tests in Power Virtual Agent and Power BI to verify their functioning across platforms.
- LO4: Implement modifications to Power Platform with Power AI Builder and highlight technical issues.

Assessed Knowledge and Abilities

The Written Assessment covers every knowledge statement (K) and the Practical Performance covers every ability statement (A).

Code	Statement
K1	Copilot grounding, the prompt contract and the human verification duty across Microsoft 365 apps.
K2	Content-creation patterns for Word, PowerPoint, Excel and Outlook, and how evidence is traced to a source.
K3	Business process automation: the Trigger to Actions to Output model, trigger families and action families.
K4	Agent anatomy in Copilot Studio: instructions, knowledge, tools, skills and connected agents.
K5	Integration, testing, security and the boundary of agency, including human-in-the-loop review gates.
A1	Scan a business workflow and identify feasible

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

	Copilot and Power Platform automation opportunities.
A2	Produce verified business content with Copilot in Word, PowerPoint, Excel and Outlook.
A3	Build Power Automate flows that integrate Forms, Outlook, Excel and Approvals.
A4	Integrate a flow or agent with an external system over HTTP using a JSON schema.
A5	Create and ground a Copilot Studio agent in approved knowledge and publish it to a channel.
A6	Test an agent and a flow, verify refusals, and inspect run history to confirm behaviour.
A7	Apply a human review gate so a consequential action requires a person before it takes effect.
A8	Diagnose technical, data-quality and permission issues in an automation and record the fix.

Daily Schedule

Day 1: Copilot Foundations, Word and PowerPoint

Scheduled learning and assessment time excluding lunch: 480 minutes (8 hours).

Time	Duration	Topic / Activity	Method	Reference
9:30-9:50	20 min	Welcome, AM digital attendance (TRAQOM), objectives for the day	Facilitated briefing	Admin
9:50-11:00	70 min	Topic 01: Grounding · responsible use · prompt design · drafting · presentation storytelling	Concept briefing with visual models and worked examples	Topic 01
11:00-11:10	10 min	Tea break	Break	—
11:10-12:44	94 min	Lab 01 and Lab 02	Demonstration then individual hands-on practice	Labs 01-02
12:44-13:44	—	Lunch (1 hour, not counted in the instructional hours)	Break	—
13:44-15:30	106 min	Lab 03: Refine a Responsible Copilot Use Policy in Word	Guided hands-on practice with acceptance check	Lab 03
15:30-16:52	82 min	Lab 04: Build a PowerPoint Story from Word and Excel	Guided hands-on practice with acceptance check	Lab 04
16:52-17:02	10 min	Tea break	Break	—
17:02-17:50	48 min	Lab 05: Enhance PowerPoint with Native Charts and Speaker Notes	Guided hands-on practice with acceptance check	Lab 05
17:50-18:30	40 min	Topic 01 recap, Q&A, PM digital attendance	Facilitated review	Recap

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

		(TRAQOM)		

Day 2: Copilot for Excel and Outlook

Scheduled learning and assessment time excluding lunch: 480 minutes (8 hours).

Time	Duration	Topic / Activity	Method	Reference
9:30-9:50	20 min	Day 1 recap, AM digital attendance (TRAQOM), objectives for the day	Facilitated briefing	Admin
9:50-11:00	70 min	Topic 02: Analysis-ready data · formulas · diagnostics · forecasting · inbox triage · controlled replies	Concept briefing with visual models and worked examples	Topic 02
11:00-11:10	10 min	Tea break	Break	—
11:10-12:44	94 min	Lab 06 and Lab 07	Demonstration then individual hands-on practice	Labs 06-07
12:44-13:44	—	Lunch (1 hour, not counted in the instructional hours)	Break	—
13:44-15:30	106 min	Lab 08: Forecast and Stress-Test a Campaign with Copilot	Guided hands-on practice with acceptance check	Lab 08
15:30-16:52	82 min	Lab 09: Triage an Outlook Inbox and Draft a Controlled Reply	Guided hands-on practice with acceptance check	Lab 09
16:52-17:02	10 min	Tea break	Break	—
17:02-17:50	48 min	Lab 10: Turn Meeting Notes into an Action Register	Guided hands-on practice with acceptance check	Lab 10
17:50-18:30	40 min	Topic 02 recap, Q&A, PM digital attendance (TRAQOM)	Facilitated review	Recap

Day 3: Business Process Automation with Power Automate

Scheduled learning and assessment time excluding lunch: 480 minutes (8 hours).

Time	Duration	Topic / Activity	Method	Reference
9:30-9:50	20 min	Day 2 recap, AM digital attendance (TRAQOM), objectives for the day	Facilitated briefing	Admin
9:50-11:00	70 min	Topic 03: BPA · the Power Platform · triggers · actions · dynamic content · conditions · approvals	Concept briefing with visual models and worked examples	Topic 03

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

11:00-11:10	10 min	Tea break	Break	—
11:10-12:44	94 min	Lab 11 and Lab 12	Demonstration then individual hands-on practice	Labs 11-12
12:44-13:44	—	Lunch (1 hour, not counted in the instructional hours)	Break	—
13:44-15:30	106 min	Lab 13: Log Form Submissions to Excel Online	Guided hands-on practice with acceptance check	Lab 13
15:30-16:52	82 min	Lab 14: Branch a Flow with a Condition	Guided hands-on practice with acceptance check	Lab 14
16:52-17:02	10 min	Tea break	Break	—
17:02-17:50	48 min	Lab 15: Suspend a Flow for a Human Approval	Guided hands-on practice with acceptance check	Lab 15
17:50-18:30	40 min	Topic 03 recap, Q&A, PM digital attendance (TRAQOM)	Facilitated review	Recap

Day 4: Copilot Studio Agents

Scheduled learning and assessment time excluding lunch: 480 minutes (8 hours).

Time	Duration	Topic / Activity	Method	Reference
9:30-9:50	20 min	Day 3 recap, AM digital attendance (TRAQOM), objectives for the day	Facilitated briefing	Admin
9:50-11:00	70 min	Topic 04: Workflow vs agent · instructions · knowledge · tools · skills · connected agents · publishing	Concept briefing with visual models and worked examples	Topic 04
11:00-11:10	10 min	Tea break	Break	—
11:10-12:44	94 min	Lab 16 and Lab 17	Demonstration then individual hands-on practice	Labs 16-17
12:44-13:44	—	Lunch (1 hour, not counted in the instructional hours)	Break	—
13:44-15:30	106 min	Lab 18: Give an Agent a Tool and a Knowledge Source	Guided hands-on practice with acceptance check	Lab 18
15:30-16:52	82 min	Lab 19: Orchestrate Connected Agents	Guided hands-on practice with acceptance check	Lab 19
16:52-17:02	10 min	Tea break	Break	—
17:02-17:50	48 min	Lab 20: Publish an Agent to Microsoft Teams	Guided hands-on practice with acceptance check	Lab 20
17:50-18:30	40 min	Topic 04 recap, Q&A, PM digital attendance (TRAQOM)	Facilitated review	Recap

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Day 5: Integration, Testing, Security and Assessment

Scheduled learning and assessment time excluding lunch: 480 minutes (8 hours).

Time	Duration	Topic / Activity	Method	Reference
9:30-9:50	20 min	Day 4 recap, AM digital attendance (TRAQOM), objectives for the day	Facilitated briefing	Admin
9:50-11:00	70 min	Topic 05: Agent flows · HTTP · JSON schema · RAG · human review · testing · governance	Concept briefing with visual models and worked examples	Topic 05
11:00-11:10	10 min	Tea break	Break	—
11:10-12:12	62 min	Lab 21 and Lab 22	Demonstration then individual hands-on practice	Labs 21-22
12:12-13:12	—	Lunch (1 hour, not counted in the instructional hours)	Break	—
13:12-14:22	70 min	Lab 23: Add a Human Review Gate to an Agent Action	Guided hands-on practice with acceptance check	Lab 23
14:22-15:17	55 min	Lab 24: Test, Secure and Troubleshoot the Solution	Guided hands-on practice with acceptance check	Lab 24
15:17-15:27	10 min	Tea break	Break	—
15:27-16:00	33 min	Lab 25: Operate a Governed End-to-End Copilot Pipeline (capstone)	Individual hands-on practice	Lab 25
16:00-16:20	20 min	Course recap and briefing for assessment	Facilitated briefing	Admin
16:20-16:30	10 min	Assessment digital attendance (TRAQOM) and TRAQOM survey	Admin	Admin
16:30-17:30	60 min	Written Assessment (WA) — SAQ, open book	Individual assessment	Assessment
17:30-18:30	60 min	Practical Performance (PP) — open book	Individual assessment	Assessment

Topic-by-Topic Delivery Guide

Topic 01: Copilot Foundations and Content Creation in Word and PowerPoint

Grounding · responsible use · prompt design · drafting · presentation storytelling

Key concepts delivered:

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- Microsoft 365 Copilot combines your prompt with permitted work context; existing access permissions always still apply.
- The prompt contract states the goal, the context, the source and the expected output format, then verifies the result.
- Copilot proposes and the user disposes: the human checks evidence, tone, sensitivity and final release.
- Word turns approved evidence into a structured narrative; a reference document keeps the draft anchored to fact.
- PowerPoint converts an approved narrative into a decision-led story with one message per slide.
- Responsible AI principles — fairness, reliability, privacy, inclusiveness, transparency and accountability — govern every use.

Hands-on labs:

Lab 01: Set Up Microsoft 365 Copilot and Prompt Safely

Alignment: K1 · A1. Level: Foundation. Apps: Microsoft 365 Copilot Chat, Excel. Learner output: A completed setup, grounding and prompt-review register in Excel. Acceptance: The register identifies the active Copilot surface, the grounding source, three evidence-backed gaps, and a verification status for every claim.

Lab 02: Draft a Project Brief in Word from Excel Evidence

Alignment: K2 · A2. Level: Foundation. Apps: Word, Excel, Copilot. Learner output: A two-page launch brief with cited objectives, milestones, risks and open questions. Acceptance: The brief fills every template heading, all figures trace to the workbook, and unsupported statements appear as open questions rather than claims.

Lab 03: Refine a Responsible Copilot Use Policy in Word

Alignment: K1 · A2. Level: Intermediate. Apps: Word, Excel, Copilot. Learner output: An approved policy draft, an issue log and a staff quick-reference checklist. Acceptance: Every logged issue has a decision and a rationale, the rewritten policy keeps its defined terms, and the quick-reference matches the approved text.

Lab 04: Build a PowerPoint Story from Word and Excel

Alignment: K2 · A2. Level: Intermediate. Apps: PowerPoint, Word, Excel, Copilot. Learner output: An eight-slide leadership deck with one message per slide and a documented evidence map. Acceptance: The deck contains eight coherent slides, all quantitative claims trace to the workbook, and the final slide asks for a specific decision.

Lab 05: Enhance PowerPoint with Native Charts and Speaker Notes

Alignment: K2 · A2. Level: Intermediate. Apps: PowerPoint, Excel, Copilot. Learner output: A polished deck with native trend, contribution and variance charts plus verified speaker notes. Acceptance: Every data slide carries a native, labelled chart traceable to the workbook, and each speaker note states only what its chart actually shows.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Topic 02: Copilot for Excel and Outlook: Analysis and Communication

Analysis-ready data · formulas · diagnostics · forecasting · inbox triage · controlled replies

Key concepts delivered:

- Copilot analyses an Excel Table with one header row, one record per row and consistent data types.
- Analysis progresses from descriptive to diagnostic, then predictive and prescriptive questions.
- A suggested formula is a proposal: check its logic, references and edge cases before you accept it.
- Scenario modelling separates assumptions from formulas so base, downside and upside cases can be compared.
- Outlook Copilot triages a mailbox, summarises a thread and drafts a reply, but a person always sends it.
- Every quantitative claim must trace back to a named sheet and cell range before it is used in a decision.

Hands-on labs:

Lab 06: Build and Audit Excel Formulas with Copilot

Alignment: K2 · A2. Level: Foundation. Apps: Excel, Copilot. Learner output: A formula-driven campaign table with revenue, margin, conversion, status and error controls. Acceptance: Every derived column uses a checked structured-reference formula, no error values remain, and the Controls sheet matches the expected record count and zero exceptions.

Lab 07: Run Deep Descriptive and Diagnostic Analysis in Excel

Alignment: K2 · A2. Level: Intermediate. Apps: Excel, Copilot. Learner output: A diagnostic workbook with a KPI summary, segment analysis, an anomaly log and management findings. Acceptance: The workbook holds a KPI summary, a segment breakdown, a populated anomaly log, and findings that each cite the sheet and range supporting them.

Lab 08: Forecast and Stress-Test a Campaign with Copilot

Alignment: K2 · A2. Level: Advanced. Apps: Excel, Copilot. Learner output: A forecast model with base, downside and upside scenarios, a sensitivity table and decision guardrails. Acceptance: Changing a single assumption cell updates all three scenarios and the sensitivity table, and the workbook states the conditions under which the forecast does not hold.

Lab 09: Triage an Outlook Inbox and Draft a Controlled Reply

Alignment: K2 · A2. Level: Intermediate. Apps: Outlook, Excel, Copilot. Learner output: An inbox triage register, a verified thread summary and one approval-ready draft reply. Acceptance: The triage register classifies every message, the thread summary matches the original messages, and the draft reply carries a named approver before any send.

Lab 10: Turn Meeting Notes into an Action Register

Alignment: K2 · A2. Level: Intermediate. Apps: Teams, Word, Excel, Copilot. Learner output: A meeting brief, a decision log, an action register and a reviewed follow-up message. Acceptance:

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Every action in the register cites a supporting line from the notes and carries a named owner and due date, and unresolved questions are listed separately from actions.

Topic 03: Business Process Automation with Power Automate

BPA · the Power Platform · triggers · actions · dynamic content · conditions · approvals

Key concepts delivered:

- Business process automation replaces repeated manual handovers with a reliable, auditable flow.
- Every flow is Trigger then Actions then Output: something happens, steps run, a result is produced.
- The four trigger families are automated, instant, scheduled and business-process triggers.
- Dynamic content passes data from one step to the next; the run history shows exactly what each step received.
- A condition branches a flow so different inputs follow different paths.
- An approval action suspends the run until a named person responds, which is human-in-the-loop by design.

Hands-on labs:

Lab 11: Prepare the Power Platform Environment

Alignment: K3 · A1. Level: Foundation. Apps: Power Platform admin centre, Power Automate. Learner output: A verified working environment with the Forms, Outlook, Excel, Approvals and SharePoint connections in place. Acceptance: The environment selector shows the recorded environment, and every connector needed by the course appears under Connections with a working status.

Lab 12: Build a Trigger and Actions Flow from Microsoft Forms

Alignment: K3 · A3. Level: Foundation. Apps: Power Automate, Microsoft Forms, Outlook. Learner output: A working Forms-to-email flow that acknowledges every enquiry automatically. Acceptance: One form submission produces one successful run, and the confirmation email arrives at the address entered in the form rather than the flow owner's mailbox.

Lab 13: Log Form Submissions to Excel Online

Alignment: K3 · A3. Level: Intermediate. Apps: Power Automate, Microsoft Forms, Excel Online, OneDrive. Learner output: An enquiry flow that both emails the requester and appends a row to an Excel log table. Acceptance: A single form submission produces one new row in the EnquiryLog table with all five columns populated, and one confirmation email.

Lab 14: Branch a Flow with a Condition

Alignment: K3 · A3. Level: Intermediate. Apps: Power Automate, Microsoft Forms, Outlook. Learner output: A branching flow whose two paths are both proven by a test submission. Acceptance: Two submissions produce two successful runs that each take a different branch, and the run history shows the untaken branch as skipped rather than failed.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Lab 15: Suspend a Flow for a Human Approval

Alignment: K5 · A7. Level: Advanced. Apps: Power Automate, Approvals, Outlook, Teams. Learner output: A leave-application flow that suspends until an approver responds and records the outcome. Acceptance: The run remains in a waiting state until the approver responds, then resumes down the branch matching the decision and emails the applicant the correct outcome.

Topic 04: Designing and Building Copilot Studio Agents

Workflow vs agent · instructions · knowledge · tools · skills · connected agents · publishing

Key concepts delivered:

- A workflow follows a fixed path; an agent decides which step to take next from its instructions.
- An agent is made of instructions, knowledge, tools, skills and connected agents.
- Instructions shape behaviour but are not enforced; tools, schemas and approvals are what actually enforce limits.
- Grounding an agent in approved knowledge is what makes its answers citable and its refusals correct.
- A tool lets an agent act on a system; a connected agent delegates a task to another specialised agent.
- Publishing to a channel such as Microsoft Teams makes the agent available to real users.

Hands-on labs:

Lab 16: Design a Scoped Agent Before You Build It

Alignment: K4 · A1. Level: Foundation. Apps: Copilot Studio, Excel. Learner output: An agent design canvas, a knowledge register, a risk-and-control table and ten acceptance tests. Acceptance: The canvas states one job, lists explicit refusals, registers every knowledge source with an owner, and carries ten acceptance tests of which at least three expect a refusal.

Lab 17: Build and Ground a Copilot Studio Agent

Alignment: K4 · A5. Level: Intermediate. Apps: Copilot Studio, SharePoint. Learner output: A working, grounded agent that answers from the approved policy and refuses everything else. Acceptance: The agent cites the policy for in-scope questions, refuses and redirects for out-of-scope ones, and passes every acceptance test recorded in the workbook.

Lab 18: Give an Agent a Tool and a Knowledge Source

Alignment: K4 · A5. Level: Intermediate. Apps: Copilot Studio, SharePoint, Power Automate. Learner output: An agent that answers vendor questions from a live SharePoint list through a published tool. Acceptance: The agent returns the correct live status for a listed vendor and reports an unlisted vendor as not approved, with the run history showing the tool was actually called.

Lab 19: Orchestrate Connected Agents

Alignment: K4 · A5. Level: Advanced. Apps: Copilot Studio, connected agents. Learner output: An orchestrating agent that routes requests to a connected specialist agent. Acceptance: Each

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

test request reaches the correct specialist, the out-of-scope request is refused, and every reply names the agent that answered it.

Lab 20: Publish an Agent to Microsoft Teams

Alignment: K4 · A5. Level: Advanced. Apps: Copilot Studio, Microsoft Teams. Learner output: A published agent available in Microsoft Teams with a recorded release decision. Acceptance: The agent responds correctly inside Microsoft Teams, still refuses out-of-scope questions, and the release log records the version, tests, approver and rollback plan.

Topic 05: Integrating, Testing, Securing and Optimising Agentic Automation

Agent flows · HTTP · JSON schema · RAG · human review · testing · governance

Key concepts delivered:

- An agent flow exposes automation to an agent, and an HTTP trigger exposes it to any external application.
- A JSON schema defines the request contract so an external caller and the flow agree on the data.
- Structured output turns a model response into named fields a flow can branch on reliably.
- Retrieval-augmented generation grounds answers in retrieved passages instead of model memory.
- The boundary of agency decides what an agent may do alone and what needs a person to approve.
- Testing means verifying correct answers, correct refusals and the run history behind both.

Hands-on labs:

Lab 21: Expose a Flow over HTTP with a JSON Schema

Alignment: K5 · A4. Level: Intermediate. Apps: Power Automate, HTTP, JSON. Learner output: An HTTP-triggered flow with a defined request schema and a structured JSON response. Acceptance: An external call with a valid body returns the expected JSON response, and the run history shows the parsed fields exactly as the schema defined them.

Lab 22: Ground an Agent with Retrieval-Augmented Generation

Alignment: K5 · A5. Level: Advanced. Apps: Copilot Studio, Knowledge, SharePoint. Learner output: A retrieval-grounded agent with a documented answer, citation and refusal test set. Acceptance: Every in-scope question is answered with a correct citation, and questions about non-existent courses or unstated prices produce an explicit refusal rather than an invented answer.

Lab 23: Add a Human Review Gate to an Agent Action

Alignment: K5 · A7. Level: Advanced. Apps: Copilot Studio, Power Automate, Teams Approvals. Learner output: An agent whose consequential action is suspended until a named person approves it. Acceptance: The consequential action never completes without a recorded approval, a rejection stops it cleanly, and an audit row exists for every request regardless of outcome.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Lab 24: Test, Secure and Troubleshoot the Solution

Alignment: K5 · A6,A8. Level: Advanced. Apps: Power Automate, Copilot Studio, run history. Learner output: A completed test log and an issue register with a diagnosed cause and fix for every failure. Acceptance: Every flow and agent has a recorded happy-path result, each deliberately triggered failure is diagnosed with a cause and a fix, and every fix has a passing retest.

Lab 25: Operate a Governed End-to-End Copilot Pipeline

Alignment: K5 · A7,A8. Level: Capstone. Apps: Microsoft 365 Copilot, Power Automate, Copilot Studio, Outlook, Teams, Excel. Learner output: A complete pipeline run with content, automation, approval and a governance evidence pack. Acceptance: One request traverses content generation, verification, automation and human approval, and the evidence pack accounts for every stage with a named owner.

Assessment Plan

- Written Assessment (WA) — Short-Answer Questions (SAQ), 1 hour, open book.
- Practical Performance (PP) — hands-on Copilot and Power Platform tasks, 1 hour, open book.
- Both instruments are open book: learners may use the slides, the Learner Guide and their completed lab files.
- A minimum of 75% attendance is required to be eligible for assessment and funding.
- Learners who are assessed Not Yet Competent may be re-assessed in accordance with the organisation's assessment policy. An appeal process is available.

Resources Required

- A Windows laptop per learner with a supported browser.
- A Microsoft 365 account with a Microsoft 365 Copilot licence.
- Access to Power Automate and Copilot Studio in the course Power Platform environment.
- The course lab files, one folder per lab, distributed through the LMS.
- Projector or large display for demonstrations.
- The slide deck, Learner Guide and Lesson Plan available on the LMS.
